

FARM DASHBOARD - ALFALFA

Card 3: Health Rating

Card 3: Soil Indicators

Card 3: Erosion Risk

Card 4: Seasonal NDVI

Card 4: Annual Trend

Card 4: Health vs Yield

Card 5: Correlation Matrix

soil_health_score	1.00	0.83	-0.11	0.07
avg_yield	0.83	1.00	-0.10	0.02
avg_ndvi	-0.11	-0.10	1.00	0.03
annual_precip_mm	0.07	0.02	0.03	1.00

Card 5: OM vs Yield

Card 5: Health vs Yield

SUMMARY: Fields=53 | Avg Yield=10.1 bu/ac | Health Score=76.3 | Correlation=0.83 | NDVI=0.665 | Total Acres=7434

HIGH PRIORITY

- Fair soil health (10 fields) - enhance organic matter, improve drainage
- Low organic matter detected (4 fields) - apply cover crops, manure, or compost
- Poor drainage conditions (13 fields) - consider drainage tiles or land grading

MEDIUM PRIORITY

- Soil compaction risk detected (2 fields) - consider deep tillage or cover crops
- Erosion risk identified (26 fields) - install terraces or cover crops

KEY FINDINGS

- Health-Yield Correlation: 0.83 (Strong positive relationship)
- Top performing fields (>=80th percentile): 11 fields
- Fields requiring attention: 10 fields

RECOMMENDATIONS

- Conduct detailed soil testing in low-scoring areas
- Apply organic amendments (compost, manure, cover crops) to low-OM fields
- Implement drainage improvements for poorly drained fields
- Establish erosion control measures (terraces, cover crops, buffer strips)
