

FARM DASHBOARD - SOYBEANS

HIGH PRIORITY

- Medium vegetation health (51 fields) - consider foliar feeding or pest inspection
- Fair soil health (10 fields) - enhance organic matter, improve drainage
- Low organic matter detected (8 fields) - apply cover crops, manure, or compost
- Poor drainage conditions (12 fields) - consider drainage tiles or land grading

MEDIUM PRIORITY

- Soil compaction risk detected (7 fields) - consider deep tillage or cover crops
- Erosion risk identified (29 fields) - install terraces or cover crops

KEY FINDINGS

- Health-Yield Correlation: 0.90 (Strong positive relationship)
- Top performing fields (>=80th percentile): 11 fields
- Fields requiring attention: 10 fields

RECOMMENDATIONS

- Conduct soil testing for nutrient levels and pH in low-performing fields
- Apply organic amendments (compost, manure, cover crops) to low-OM fields
- Implement drainage improvements for poorly drained fields
- Establish erosion control measures (terraces, cover crops, buffer strips)
